Release Notes   March 7, 2019
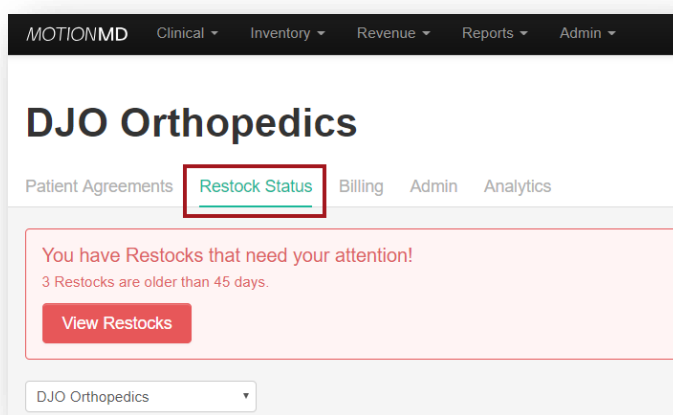

This deployment may include new features, bug/defect fixes, security enhancements, and data migration related issues. The below list contains all the items that will go to Production on 3.07.19.

[Enhancement] Update the Inventory tab on the dashboard to Restock Status to more clearly convey what can be done on that page

[Enhancement] When the Billing Doc is printed it should be the same document as what was sent to billing

[Enhancement] Store the time stamp of Verbal Order

[VeriPro] Add Service Type Code 12 to eligibility call out to improve DME details for payors who only respond to that code

[Bug Fix] Restock Status should now show the status of restocks with multiple Oracle shipments (multiple order numbers)

[Bug Fix] Dataworks JSON incorrectly showing the patient_access_payers.id

[Bug Fix] NoMethodError: undefined method `script_attached?` for # <Biller0x007f1d95864520>

[Tech Debt] Remove the old `patient_agreement_warnings_enabled` field from accounts

[Tech Debt] Update the scrypt gem to version 3.0.6 so bundler builds correctly on all development environments
